

[REDACTED]

We met up with the representatives from DGL.

[REDACTED] took us to the new Waste Water Treatment Works and took us through the process involved. He explained to us that a colleague and himself would now be looking after the treatment system.

[REDACTED] told us that the system is maintained on a twenty four hour basis and that a number of procedures have been built into the system to ensure that the effluent can be contained if any problems occur.

The company continue the sample monitoring of the entire site and surrounding waterways for base line and compliance information.

We agreed to re visit the site within two months.
